

## DECK SAVER SYSTEM

### ABOUT THE PROJECT

This Santa Ana commercial delivery services property, was in need of a full roof and deck recondition for their approx. 136,300 sq. ft. property, roof repair areas included parapets, flashings and front overhang, as well as exposed roof deck. The owner and property management company chose the SureCoat Deck Saver System because it remains flexible, has the top-rated water proofing technology to protect the many areas of ponding water, can be quickly cleaned and top-coated to keep the system functioning like new and can easily be repaired when adding or changing out roof mounted equipment. The **SureCoat Deck Saver System** is ideal for existing decks requiring leak repairs, maintenance or complete waterproofing with slip resistance built in. It is a single component system which is easy to install and maintain.

The contractor cleaned and prepped the area to be repaired, repaired cracks, tear, splits and voids in the roof surface, applied pond filler to 8 ponding areas to improve drainage, then applied SureCoat to drains, penetrations, ponds and waterways. After addressing the roof, the SureCoat Deck Saver system was used to repair the exposed roof deck which was top coated with our **Light Grey StrucSureCoat** for a “like new” finish.

Choosing the SureCoat Roof and Deck Saver Systems on this project allowed for a 10 year, renewable warranty.

**The DeckSaver System is available in several different slip-resistant textures and thicknesses depending on your project needs.**
